Re: Chapter 6, Section 2 Permit Application, AP-0631

Dear Mr. Hughes:

The Division has reviewed the information submitted in response to the Division's May 9, 2003 letter, regarding BACT for particulate emissions from the coal fired calciners.

The Division notes that the particulate emission rate of 0.01 gr/dscf, for the Rio Grande Portland Cement Corporation has not been demonstrated. However, without further technical information, the Division considers this emission rate to be technically feasible and a cost analysis is required. Please submit a BACT cost analysis for achieving an emission rate of 0.01 gr/dscf from the coal fired calciners.

Also, please note the request in the Division's May 9, 2003 letter regarding clarification of NO_x BACT issues. Please submit the requested clarification.

The Division considers this information necessary before technical decisions can be made regarding the application. Therefore the requested information must be received before the application can be deemed complete.

If you have any questions regarding this matter, please contact me at (307) 777-3786.

Sincerely,

Cortnie Morrell

Air Quality Engineer
Air Quality Division
